

## POPPIES INTERNATIONAL ENVIRONMENTAL POLICY

### **Water**

Some factories have a purification system for all the water coming from the factory. We have a government certificate to purify water and to drop the water in the canal.

We collect the rain water to reuse in cooling systems.

### **Renewable energy**

We buy renewable energy (certificate).

We have solar panels installed on the roof of some of our buildings.

### **Packing and food**

We use maximum possible Euro pallets (reusable).

We try to optimize the packaging in order to reduce packaging material.

We use the maximum of recycled carton. We use packaging that is recyclable.

We separate the waste: carton, food waste, plastic and other waste. The carton will be recycled. We try to minimize our waste as much as possible.

We contribute to the program to use less packaging for making products.

The products not compliant with our quality standards are used as much as possible for animal feed (feed certificate).

### **Sustainable raw materials**

For some raw materials, sustainable sources can be used.

### **Transport**

The most of our suppliers of raw materials and packaging are local suppliers in order to reduce the CO2 of the transport.
